- Select administrative data sources: the primary is the tax registration data, the additional is the business registration data.
- Establish communication agreements with 2 administrative organizations

# Building of SBR

## Administrative data input processes (cont.):

- Data processing procedures:

# Building of SBR

Issues and Challenges	Solution
Use of different classifications	Make conversion of different classifications
Data quality of administrative data. Particularly, in the business registration data, VSIC field maybe not accurate.	Recode based on information collected from business surveys/censuses
Administrative data is not be provided continuously	Law of statistics is legal framework for building and maintenance of SBR. Establish communication agreements with 2 administrative organizations

# Building of SBR

Issues and Challenges	Solution
Missing data of fields	Make a priority criteria based on quality of data sources to select data for updating.
A registration code is use consistently in the two administrative data sources that are synchronized daily	Use the code is as the unique ID

# Maintenance of SBR

- **Updating procedures:**

Update changes on birth, death, classification codes, linkages, administrative information, attributes and dealing with conflicting information

# Use of SBR

- Classification of enterprises
  - Institutional sector
  - Kind of activity
  - Location
- For administrative management purposes
  - Promoting equality of opportunity for all types of ownership
  - Support of making economic policies
- Drawing sample for enterprise survey annual, establishment census every 5 years
- Producing business statistics
